Annex to the Declaration of Conformity  
Az.: 16.02.17 Lumina/2016/06-2020 from 16.02.2017

Note that depending on the type of mounting (for example, eyelet mounting), dust, foreign bodies, etc. can accumulate on the surface of the housing. The risk of contamination is not completely excluded. The proper positioning of the luminaire and cleaning and disinfecting measures is an important function for maintaining adequate hygiene. It is necessary to fully observe the controls on foodstuffs (for example, visual inspections, hygienic controls and adequate systematic measures). In the case of risk analysis and / or risk assessment, all contamination must be completely taken into account and avoided, especially in the full range of influence over open foodstuffs or consumer goods (packaging material, machines, tools etc.). Responsibility for hygiene is entirely the responsibility of the food manufacturer or the producer of consumer goods. A sufficient safety distance (approx. 2-3 m at least) must be considered.

**Cleaning Instructions**

The manufacturer of the lamps can not systematically determine the cleaning and disinfecting measures with frequency, scope, technique and means used. The lamp must always be clean and free of micro-organisms and foreign bodies when handling foodstuffs or articles of consumption. The luminaire can be cleaned well with conventional industrial cleaners. No solvent-containing substances may be used.
